Welcome to the California ReLeaf Network Tree Map

The ReLeaf Network Tree Map is a compilation of tree inventories from California ReLeaf Network Member Organizations—a Network of over 80 nonprofits and community groups working to green cities across California, from San Diego to Eureka. This tool allows you to see trees planted and cared for by the ReLeaf Network in communities all over California. Users will also be able to view those trees' benefits, such as air pollution and stormwater reduction, carbon sequestration, and energy savings. Visit our website to learn more about the [ReLeaf Network](#), our [Tree Inventory Program](#), and how to [Find a Network Member Group](#) near you to get involved in local tree planting and urban greening efforts.

Total Trees in the ReLeaf Network Map: 2,095

ECO BENEFITS

Total
\$2,394.72

Carbon Monetary
\$2,330.77

Air Quality Monetary
\$14.43

Stormwater Monetary
\$49.52

No Filters Applied

LEGEND

Layer: Network Organization

Showing 18 of 18 network organizations.

- Your Children's Trees

Layers

- CES4 Communities
- Tribal Land Communities
- Low Income Communities

Program Goals

Enable Network Members to Track Data on Trees Planted

Allow for Easy Monitoring of Tree Health and Survival

Easily Report Deliverables to Funders

Evaluate Factors that Influence Tree Survival and Growth

Use Examples

Tree 11

| Tree | |
|-----------------------------|---------------------|
| Trunk Diameter/DBH (inches) | 15 |
| Status | Planted – Alive |
| Common Name | Western Sycamore |
| Address | 7266 Alameda Avenue |
